MYKHAILO LITVINOV

Full-Stack Developer

mi.litvino@gmail.com Finland, Helsinki /in/mlitvino mlitvino

PROFILE SUMMARY

Full-Stack Developer with a strong foundation in C/C++ system programming and full-stack web development. Experienced in building scalable microservice-based applications and developing cross-platform user interfaces. Comfortable working across backend architecture, infrastructure, performance-critical systems, and modern frontend technologies.

SKILLS

- **Programming Languages**: TypeScript, JavaScript, Go, C/C++, Python
- **Frameworks**: React, React Native, Expo, NestJS, Fastify
- **Databases**: PostgreSQL, MongoDB
- **Tools**: Docker, Git, Make, Nginx, GitHub Actions (CI/CD)
- **Cloud:** Google Cloud Platform (GCP), Hetzner
- **AI Tools:** GitHub Copilot, Claude Code, Codex

EXPERIENCE

Software Developer Student

08/2024 – Present

Since 2024 I've been studying at **Hive Helsinki** and writing code every day, completing **12+ projects** that range from low-level C/C++ to **full-stack** web apps. Outside school, I build **peronal projects**, such as a cross-platform **mobile app** and a **developer tool**, contribute to an **open-source** movie tracker, and took part in the **Junction 2025 hackathon**, where our team of five built an app over two days.

Amulex

08/2020 – 09/2022

Customer Support & Sales Specialist

- Managed client requests and appointments in a **CRM** system
- Provided **technical support** to clients
- Supported sales by identifying **client needs**

PROJECTS

Transcendence - Multiplayer Web Platform (Team of 5)

Backend Lead

Real-time multiplayer platform with user accounts and leaderboards.

- Solved **communication issues** between frontend and backend by setting up **shared API contracts**
- Designed 5 NestJS **microservices**, each able to **scale** on its own and fail without affecting the others
- Set up a **CI/CD pipeline** that tested and deployed every change to **Hetzner Cloud**

Korob - Tracking Application (Personal Project)

Frontend Developer

Minimalist mobile app for tracking expenses, focused on simplicity.

- **Designed** the main **user flow** to let users add an expense in a **few taps**
- Built a **clean**, **consistent UI** from reusable React Native components across **iOS** and **Android**
- Chose **local-first storage** so the app stays **fast** and **private**, without needing a server

Reaktor RPS - Real-Time Match Tracker (Solo)

Full-Stack Developer

Live Rock-Paper-Scissors match tracker with real-time updates and match history.

- Worked with an **unfamiliar legacy** API: explored its data and **live stream** to build a reliable sync
- The API took **~6 s** per request, so I added a **database** and **cache** layer, bringing it down to **~20 ms**
- Delivered on a **tight deadline** by planning the work in stages

EDUCATION

Software Development

2024 – 2026

HIVE HELSINKI

- Project-based **peer-to-peer** coding school
- **18-month**, full-time, on-site program
- Focused on low-level programming, **algorithms** and **team collaboration**
- Completed **12** intensive programming **projects**

LANGUAGES

English - professional, **Russian** - native , **Ukrainian** - native, **Finnish** - elementary
